SUMMARY

Recent MSc graduate in Data Science, AI and Digital Business, seeking Junior AI Engineer / Data Scientist roles, with hands-on experience across ML model development, data pipelines, and analytics.

SKILLS

- Programming:** Python, SQL, Git, GitHub, HTML, CSS
- Machine Learning:** CNN, RNN, VADER NLP - model training, tuning & evaluation, feature engineering
- Libraries:** Pandas, NumPy, Scikit-learn, Seaborn, Matplotlib, Plotly, SQLAlchemy
- Cloud & Data Engineering:** GCP cloud storage, ETL pipeline design, data ingestion & profiling, source-to-target mapping, MongoDB
- BI / Visualization:** Power BI, Tableau, Metabase, Plotly, Seaborn
- Other Tools:** Excel (Advanced), Streamlit, OpenCV, Jupyter
- Core Competencies:** Analytical & Problem-Solving Mindset, Stakeholder Communication, Attention to Detail, Adaptability

WORK EXPERIENCE

Data Analyst Consultant - Freelance <i>Optical Store - United Arab Emirates</i>	Mar 2026 - Jun 2026
- Designed and implemented an end-to-end ETL pipeline using Python and PostgreSQL, processing 110,639+ transaction records across 14 branches from a custom ERP export system. - Performed source-to-target mapping from ERP CSV exports to a structured PostgreSQL schema, defining transformation and cleansing rules across 27 data fields. - Standardized 12,314+ unique product descriptions into structured categories and unified 30+ payment method variations into 8 standard types through automated cleaning scripts. - Built a multi-level drill-down BI dashboard in Metabase enabling branch-level, brand-level, and payment analysis across 14 locations.	
AI & ML Engineering Intern <i>Aura Health Technologies - Berlin, Germany</i>	Jul 2025 - Feb 2026
- Structured and maintained core data repositories of 500,000+ image frames, ensuring data accuracy and supporting scalable, reliable ML workflows. - Conducted data quality validation and profiling across 500,000+ records, identifying and resolving data inconsistencies. - Collaborated with cross-functional teams to translate research requirements into structured data deliverables. - Researched and implemented CNN architecture improvements, reducing model inference time by 15 seconds. - Worked with GCP-based storage infrastructure for managing large-scale medical datasets. - Used MongoDB and Git to streamline data management and collaboration.	
IT Intern <i>Hirsch Bedner Associates (HBA) - Dubai, UAE</i>	Jul 2022 - Sep 2022
Tracked and analyzed IT issues using Excel, maintaining a structured database and generating reports to monitor system performance.	

EDUCATION

Master of Science - Data Science, AI and Digital Business <i>GISMA University of Applied Science - Potsdam, Berlin</i>	Sep 2023 - Sep 2025
Bachelor of Science - Information, Systematics and Management <i>Manipal University of Higher Studies - Dubai, UAE</i>	Oct 2020 - Nov 2023

PROJECTS

Stock Price Prediction with Deep Learning (Link) <i>Python, TensorFlow, RNN</i>
Engineered time-series features from historical price data and developed a recurrent neural network to model stock price trends, handling sequence structuring, normalization, and train/test splitting.

- Evaluated model performance using appropriate time-series validation techniques, avoiding lookahead bias common in financial prediction tasks.
- Translated raw market data into structured, model-ready features - directly analogous to systematic feature engineering workflows.

Hindi Handwritten Vowel Recognizer [\(Link\)](#)

Python, TensorFlow/Keras, OpenCV, Streamlit

- Collected and labeled a custom dataset of 1,260 handwritten Devanagari vowel images, applying OpenCV preprocessing (thresholding, resizing, noise removal) to standardize inputs for training.
- Designed and trained a custom CNN architecture from scratch, achieving ~87% validation accuracy on unseen handwriting samples.
- Deployed the model as a live interactive demo using Streamlit, enabling real-time handwriting predictions.
- Diagnosed and resolved real-world deployment issues, including positional bias and stroke-width mismatch between training data and live hand-drawn input.
- Rolled back a data augmentation experiment after it degraded validation accuracy, documenting the trade-off analysis and reasoning behind the decision.

Customer Sentiment Analysis [\(Link\)](#)

Python, VADER NLP, Matplotlib, Seaborn

- Applied VADER sentiment analysis on customer review datasets, producing actionable satisfaction insights and trend reports using Python and visualization libraries.
- Cleaned and preprocessed raw review text (tokenization, stopword removal, normalization) to prepare it for sentiment scoring.
- Built visual dashboards in Matplotlib and Seaborn to surface sentiment trends over time and across product categories, supporting data-driven customer experience decisions.

Data Modeling for Retail Insights [\(Link\)](#)

Python, Pandas, Power BI/Tableau

- Created structured data models analyzing store product placement patterns, improving business intelligence reporting and sales performance insights.
- Used Pandas to clean, transform, and aggregate multi-table retail data into analysis-ready structures.
- Built interactive Power BI/Tableau visualizations to communicate product placement and sales performance findings to stakeholders.

CERTIFICATES

- TensorFlow for Deep Learning Bootcamp
- Complete Data Analyst Bootcamp - Basics to Advanced
- Natural Language Processing (NLP) in Python

LANGUAGES

- English - Full Professional Proficiency
- Hindi - Native
- German - Elementary (A2)
